## PULVERISER KZ 260

### Standard machine

Front and rear mounting

Low profile design

Ø 245 mm rotor tube with shaft ends Ø 70 mm

Outside diameter flails Ø 510 mm

High rotor speed

Chassis 8/12 mm with internal counter hooks

Large diameter pulleys

5 V-belts SPB section with automatic belt tensioner

Hydraulic cylinder – miter with linear guide

Three point linkage cat. II Ø 28/25 mm

Right-angle gearbox 750 rpm or 1000 rpm

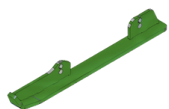

Heavy duty flail 2,2 kg with fixing bolt M20

Height adjustable rear roller Ø 220 mm

Pto drive shaft

### Option

Skids

This machine has been specially developed for heavy wood such as cherry wood, which is difficult to pulverise. This is achieved by the high speed and large diameter of the rotor, which ensures a high circumferential speed of 54 m/s (1000 rpm).
